Components and Licences Version 4.37 Author: Meter

1. General

Meter Gomoku Link is built from several components, each distributed under its own original licence. This notice lists every third-party / open-source component shipped with the software, together with its licence type and the compliance points that matter. Except as stated below, the software gives no warranty on behalf of any component.

2. Interface and Companion Code (MIT License)

The user interface, the host program and the companion scripts were written by Meter and are released under the MIT License: anyone may obtain, use, copy, modify, merge, publish, distribute, sublicense and sell copies of the software free of charge, provided the original copyright notice and licence notice are kept in the copies. The software is provided "as is", without warranty of any kind, express or implied.

3. Rapfi Engine (GNU GPL-3.0)

The playing core is the open-source Rapfi engine (the official Gomocup engine; the official build 250615 is shipped in five instruction-set variants - avx512vnni / avxvnni / avx512 / avx2 / sse - together with its weights and configuration files). Rapfi is released under the GNU General Public License version 3.0 (GPL-3.0). Under GPL-3.0 you may obtain, use, modify and redistribute the engine free of charge; the source code is available at the official Rapfi repository (github.com/gomocup/rapfi).

4. Documentation Fonts (SIL Open Font License 1.1)

These manuals are typeset in Source Han Serif (shipped here as the equivalent Noto Serif SC) and Source Han Sans (shipped here as the equivalent Noto Sans SC). Both are licensed under the SIL Open Font License version 1.1: free for personal and commercial use, including embedding into documents that are redistributed; the font files themselves may not be sold on their own, and modified versions may not be sold under the original font names. Neither the software nor the documentation uses any non-commercial font such as Microsoft YaHei or SimHei.

5. Microsoft Edge WebView2 Runtime

The UI host depends on the Microsoft Edge WebView2 Runtime (normally already present on Windows 10/11). The runtime is provided free of charge by Microsoft; this installer does not redistribute it and only offers to open Microsoft's official download page when it is missing.

6. Installer Tooling (Inno Setup)

The Windows installer was produced with the open-source Inno Setup tool, whose licence permits building and redistributing installers free of charge, including commercially.
